

Details of the Team and Problem Statement

Organization Name : All India Council for Technical Education

PS Code: SIH1280

Problem Statement Title: Development of e-Portal for facilitating Case Management Hearing of various types of cases.

Theme Name: Miscellaneous

Team Name: Hack4Justice

Team Leader Name: Shravan Jare

Institute Code (AISHE):11015

Institute Name: Walchand college of engineering, Sangli

Idea/Approach Details

Process flow chart

Idea:

- We are creating a **e-portal** which will provide legal services to clients and provides a **secure** government portal for efficient case management.
- Client will use the **e-portal** to upload their case details, documents, and evidence, *such as a user uploading divorce papers and supporting evidence for their legal case*
- Client will upload a legal document .e.g., *divorce papers*, and the **AI** will explain the document's content, highlight hidden clauses e.g. *property division after divorce*
- Client will input their legal situation or question, and the **AI** will provide information and guidance based on the applicable laws and circumstances.

Technology stack here:

- **Hugging Face Transformers** (AI legal text analysis)
- **LexNLP + spaCy** (legal entity extraction)
- **Elasticsearch** (smart lawyer & case search)
- **Neo4j** (lawyer–case relationship graph)
- **AES-256 + Blockchain Audit** (secure & immutable records)
- **Docker, Kubernetes** (scalable deployment)

Solution:

- Our integrated legal platform leverages **AI** to simplify legal complexities, offering immediate guidance on legal matters an
- With an **AI-driven** document analysis tool for effortless comprehension, clear explanations, and translations in various **regional languages**.
- Our **advanced search functionality** allows users to discover lawyers based on ratings, case history insights, transparent fees, and comprehensive profiles.
- Additionally, our **secure government portal** facilitates streamlined case management, document uploads, and hearing scheduling, all backed by **end-to-end encryption** for utmost confidentiality.

Idea/Approach Details

Use Cases :

➤ **Client:**

- Access an **AI-driven** advisor for a comprehensive list of legal actions tailored to your needs.
- Effortlessly understand complex legal documents with AI-powered assistance.
- Access regional language translations for better comprehension.
- Find and connect with lawyers across India effortlessly

➤ **Advocate:**

- Expand your client reach and income potential with our platform.
- Efficiently manage cases and automate client updates

➤ **Judge/Court/Admin :**

- Enhance sentencing transparency and reduce case backlog in the judicial system.
- Upload documents and schedule hearings securely within a government portal.

Dependencies

- The effectiveness of your AI tools relies on access to high-quality legal data for training and validation.
- To integrate a secure government portal, you'll depend on cooperation and support from government authorities and agencies

Show stopper

- Building trust in your platform, especially among lawyers, judges, and clients, is crucial. Demonstrating the reliability of AI advice and secure communication is a challenge. Maintaining a seamless user experience .

Impact

- By integrating automation tools into the legal ecosystem, clients, lawyers, and judges can collaborate more effectively, improve access to justice, and enhance the overall efficiency and fairness of the legal process.
